# GREENE COUNTY PUBLIC HEALTH MONTHLY ACTIVITY REPORT July 30, 2021

**1. Foundational Capabilities**

a. *Public Health Emergency Preparedness*

- i. A monkeypox case has been confirmed in a U.S. citizen who recently returned from travel to Nigeria. CDC is working with the airline and state and local health officials to contact airline passengers and others who may have been in contact with the patient during two flights, including Ohio residents. Travelers on these flights were required to wear masks, and therefore, it's believed the risk of spread of monkeypox via respiratory droplets to others on the planes and in the airports is low. Symptoms of monkeypox most often begin with a prodrome of fever and other non-specific symptoms such as malaise, headache, and muscle aches following an average incubation period of five to 13 days. New lymphadenopathy can also occur. After the prodrome, which lasts approximately one to three days, a generalized rash appears.
